CPE Resident Didactic: Introduction to Pastoral Research
Patricia E. Murphy, Ph.D.
George Fitchett, D.Min., Ph.D.

Rationale
For a number of years one of the goals of the Department’s research program has been to transform the profession of health care chaplains into “a research-informed profession.” That goal is shared by a growing number of colleagues in health care chaplaincy. For example, in 2010 the Association of Professional Chaplains adopted Standards of Practice for Professional Chaplains in Acute Care (http://www.professionalchaplains.org/index.aspx?id=1210). One of the Standards is about research.

Standard 12: Research
The chaplain practices evidence-based care including ongoing evaluation of new practices and when appropriate, contributes to or conducts research.

Interpretation
Chaplaincy care has for many years been provided based on the concept of “presence” and non-directive active listening, and on the chaplain’s sense that their offerings are effective (sometimes based on direct feedback from families, patients or staff). However, other health care disciplines, over the past 10 years, reviewed their practices and have begun to base their practice on research evidence. Increasingly, chaplains have been asked to demonstrate that they, too, practice out of a research base, and explicitly make a contribution to health care. Chaplaincy care is amenable to research in many ways; its practitioners should be sufficiently familiar with existing evidence to present it to their health care colleagues from other disciplines, read and reflect on new research’s potential to change their practice and be willing and able to integrate that which is better for patients, families, or staff. In some cases, where the chaplain has sufficient skills and support, this will also mean participating in, or creating, research efforts to improve clinical chaplaincy care.

Since the residency year is most often used as preparation for a career in health care chaplaincy, we believe graduates of our residency program should be informed consumers of research. That is, they should be able to find research that is relevant to their ministry, read and understand such relevant studies, and be able to describe the implications of the studies for their ministry.

Description
In this seminar, the residents will learn basic concepts about research by reviewing research articles whose findings are relevant for health care ministry. The aim of the seminar is to help chaplain residents integrate findings from research into their ministry without sacrificing essential values such as empathic presence. The seminar will also include a brief introduction to the ethics of research. The overall aim of the seminar is not to turn chaplains into researchers, but to help chaplains become informed research consumers.
Seminar Goals
As a result this seminar, residents will:
1. Develop informed and critical understanding of research in order to apply results thoughtfully to evidence based practice.
   a. Be able to read and understand a simple research paper;
   b. Be able to describe the implications of a study for their pastoral ministry;
2. Become familiar with research that shows the negative physical and emotional effects of religious struggle and its implications for pastoral ministry.

Seminar Format
The format for most of the sessions will have the residents working in teams (2-3 residents) to present a summary of a research paper to the other seminar participants. That summary will include a description of how the research is relevant for healthcare chaplaincy. The residents will use the standard research summary form to guide their summary of the research they present.
Syllabus - CPE Resident Didactic: Introduction to Pastoral Research

Patricia E. Murphy, Ph.D.
George Fitchett, D.Min., Ph.D.

Seminar 1, January 3, 9:00 am to Noon
A. Introduction
B. Multiple Ways of Knowing: An Introduction to Pastoral Research
C. Discussion of Fitchett and Groessoehme chapter based on outline.
Reading:

Seminar 2, January 8, 9:00 am to Noon
A. Presentation and Discussion of Qualitative Research
B. Introduction to PubMed
Reading:

Seminar 3, January 10, 9:00 to 11:00 am
A. Introduction to the Ethics of Research
B. Introduction to Key Statistical Concepts
Readings:

Seminar 4, January 15, 9:00 to 11:30 am
A. Presentation and Discussion of Quantitative Research
B. Using PubMed to locate research relevant for your ministry

Reading:

Seminar 5, January 17, 8:30 to 11:00 am
A. Presentation and Discussion of Quantitative Experimental Research
B. A Review of Research about Chaplaincy (George presentation)

Readings:

Seminar 6, January 22, 9:00 to 11:30 am
A. Presentation and Discussion of Research Papers selected and presented by residents, Team A and Team B

Seminar 7, January 24, 9:00 to 11:30 am
A. Presentation and Discussion of Research Papers selected and presented by residents, Team C
B. Next Steps for Evidence-Based Spiritual Care (George presentation)

Seminar 8, January 29, 8:30 to 11:30 am
A. Presentation and Discussion of Research Papers selected and presented by residents, Team D and Team E
B. Evaluation of the seminar
